# HEALTHCARE SERVICES

## Survival Of The Child And Their Treatment

Nearly 1.73 million children die in India every year due to lack of treatment. Ayngaran foundation works with the children from the most marginalized, economically deprived families to support them in their treatment of critical surgeries. The parents usually do not have a huge amount of money to spend on the treatment of such surgeries. The organization sponsors treatment of these underprivileged children and helps them to get back to their normal lives.

Child survival is a field of public health concern with reducing child mortality. Child survival interventions are designed to address the most common causes of child deaths that occur diarrhea, malaria and neonatal conditions. Many countries are devoted to the child survival interventions as a way of reducing the child mortality. Every year nearly 10 million children under age five die, mostly from preventable and treatable diseases.

## Become a Volunteer

Sometimes the real challenge is not recruiting volunteers – but, rather, keeping them engaged, happy, and eager to come back. Engagement efforts should not be localized to any certain part of the volunteer lifecycle, but instead need to be ongoing. Laying the groundwork for your volunteer engagement strategy starts the first time the volunteer comes through your door and continues with consistent communication and recognition.
